PROFILE

Senior Full Stack Engineer with 6 years of experience building and scaling customer-facing web products. Strong on the frontend (React, Next.js, TypeScript) and the backend (Python, REST API design, PostgreSQL, Redis), with hands-on experience in BFF architecture and production reliability. Comfortable owning projects end-to-end — from discovery and design through deployment and on-call support — and used to working closely with product, design, and clinical stakeholders to ship work that moves the numbers.

PROFESSIONAL EXPERIENCE

Senior Full Stack Engineer

March 2021 – Present

Numan · London, UK

- Shipped customer-facing features across commercial and account flows (React, Next.js, TypeScript) used by tens of thousands of active subscribers across multiple product lines.
- Designed and ran A/B experiments via Statsig across pricing, onboarding, and checkout flows; contributed to a **40%+ improvement in overall subscription retention** through iterative experimentation and data-led product decisions.
- Led a full legacy-to-Next.js migration using a BFF architecture, reducing frontend build complexity and clarifying team ownership boundaries — cutting cross-team dependency incidents noticeably.
- Delivered an end-to-end commercial flow for a new product line — landing pages, subscription signup, checkout, and post-purchase — which became one of the company's primary revenue surfaces.
- Built and maintained Python backend services (Django) backed by PostgreSQL and Redis, including BFF layers powering customer-facing flows; designed REST APIs consumed by web clients and internal tooling.
- Built an internal clinician tool that streamlined operational workflows, reducing manual steps for the clinical operations team and contributing to lower operational costs.
- Mentored junior and mid-level engineers through code reviews, design discussions, and pairing; participated in on-call rotations maintaining high availability for revenue-critical systems.

Software Engineer

Dec 2019 – March 2021

ATS Digital · Tunisia

- Built core features of a web-based gaming tournament platform (MERN stack, microservices), handling real-time matchmaking, bracket management, and user profiles.
- Improved performance and reliability of a healthcare platform used by patients to access records, book consultations, and request clinical reviews — contributing to a meaningful reduction in support load.
- Developed interactive features for a student coding competition platform, including live problem submission and real-time leaderboard updates.

OPEN SOURCE PROJECTS

Frontend Observer · TypeScript · npm

Lightweight TypeScript SDK for tracking frontend errors, API request timings, and async measurements. Built for teams that need visibility into slow or failing requests without committing to a full observability platform up front. Designed a pluggable exporter system that sends events to the console, HTTP endpoints, or custom destinations, with a clean TypeScript API and safe failure handling so the SDK never breaks the host app.

Perf Reviewer · TypeScript · npm · Web Vitals

TypeScript library that generates readable performance reports from runtime signals — page performance, API speed, slow resources, long tasks, and manual measurements. Solves the problem of performance issues being hard to diagnose from user feedback alone by turning raw signals into scores, summaries, bottlenecks, and practical recommendations. A focused diagnostic tool that complements Lighthouse and Sentry rather than replacing them.

Error UX Kit · *TypeScript · npm · CLI tooling*

TypeScript toolkit that maps backend/API error codes into consistent, user-friendly frontend messages and actions — addressing the common production problem where APIs return many error codes but frontends fall back to vague messages like “Something went wrong,” causing poor UX and unclear ownership. Ships with error catalogs, safe error normalisation, validation rules, coverage reports, and a CLI checker that flags missing messages, owners, categories, retry actions, and support guidance.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, HTML5, CSS3, Vue.js, Nuxt.js

Backend: Python (Django), Node.js, REST API design, BFF architecture

Databases & Caching: PostgreSQL, MySQL, Redis

Infrastructure: Docker, Git, GitHub Actions (CI/CD)

Testing: Jest, Vitest, React Testing Library

Observability: Sentry, Grafana, production monitoring, on-call debugging

Other: Statsig (A/B testing), npm publishing, CLI tooling

LANGUAGES

Arabic: Native

French: Fluent (B2)

English: Fluent (C1, certified)

German: Basic (A1, currently learning)

EDUCATION

Bachelor's Degree in Computer Science Engineering

2020

Ecole Supérieure Privée d'Ingénierie et de Technologies (ESPRIT) · Tunisia
